Propuesta de Laravel Livewire

La pregunta es ...

Demostración

- 1. Contador con vistas ("clásico").
- 2. Contador con Livewire.
- 3. Cosas por hacer con Livewire.

https://github.com/jimezam/UCaldas-Jornadas-2020

¿Qué ofrece Livewire?

- Livewire is declarative → make front-end interactions a "side-effect" of your state
- Livewire is anti-boilerplate
- Livewire is a back-end interface at its core
- Livewire is simple to use

Tomado de https://laravel-livewire.com/docs

Ventajas

- "Fácil de usar"
- "Ágil". Especialmente si el proyecto no requiere API REST.
- Un sólo lenguaje/framework involucrado.
- Interactúa con Javascript (hooks) y otros frameworks de frontend (Alpine JS) de ser necesario.
- ... ¿Otras?

Desventajas / temores (a lo desconocido)

- Livewire violates the separation of concerns
- Livewire violates the single-responsibility principle
- Livewire complicates the development workflow
- Livewire is inefficient
- Livewire is difficult to test
- Livewire is inherently imperative, whereas user interfaces are inherently declarative.
- Livewire is an unfortunate victim of Conway's Law
- Livewire has technical misgivings (?)
- Liveware has a lack of support, and probably always will (!)
